I have been given the responsibility of compiling the CDA annual statistics on the status of fluoridation in Canada, and am therefore requesting you to be kind enough to give me your assistance.

The following information is needed from your province, as of January 1, 1967:

- 1) List of water systems which are fluoride adjusted to approximately one ppm.
- 2) List of communities or municipalities and populations, supplied by the above.
- 3) List of communities and populations using naturally fluoridated water having a level of 0.7 ppm fluoride or more (unless included above).
- 4) Total population on community drinking water systems (fluoridated or not). (Please omit industrial water not used for drinking).
- 5) List of any fluoridation plebiscites held during 1966, with results.
- 6) Please show local authorization for any 1966 commencement or cessation of fluoridation. (Examples: as result of plebiscite; decision by council; by PUC; by other authority as specified).

The above list is not as formidable as it looks. I realize the lateness of this request and so I would be especially grateful if you will see that I receive this information soon. If any portion of it is not readily available, please do not delay the reply but send what you have, and follow up with the rest later.

To assist you, I enclose a copy of "Fluoridation in Canada, 1966" issued by the
